Setting Up Camera Wi-Fi Guide

Setting up the Camera Wi-Fi

This process only needs to be completed the first time the camera is installed in a vehicle or if the Wi-Fi Network has changed.
You also require cellular reception for your phone to complete this.

1. **Download the RideView Companion App**, available on both the Apple App Store and Google Play Store.

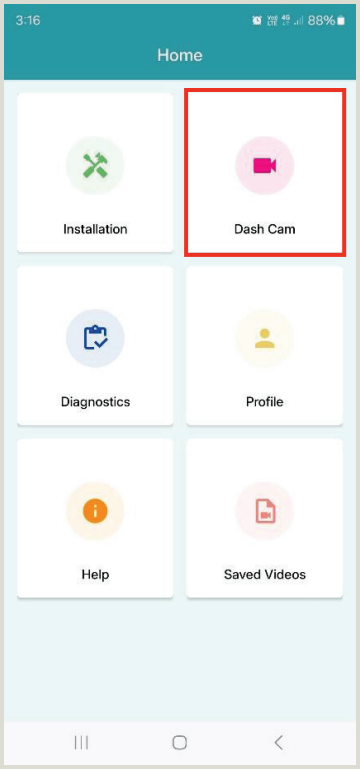
   Developer: *LightMetrics Technologies Pvt. Ltd.*

2. **Log in using an Installer account.**

   Ensure Wi-Fi is enabled on your phone so it can connect directly to the camera.

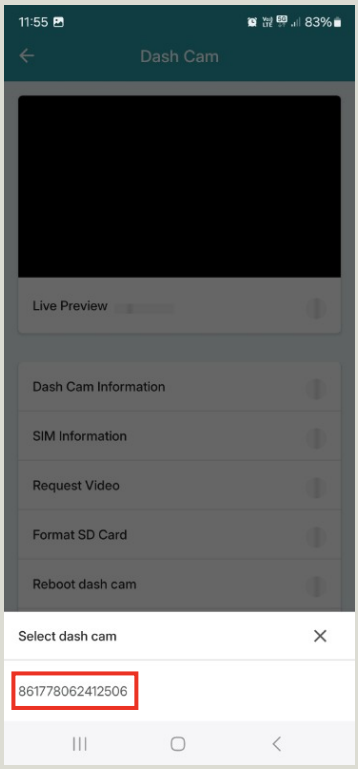
3. **Start the vehicle** and wait for the camera to power on.

4. On the app's home screen, tap **"Dash Cam"**

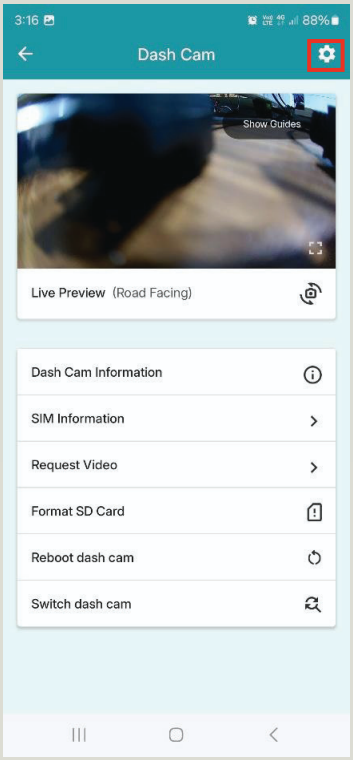


5. The camera's **IMEI number** should appear as the only available device.

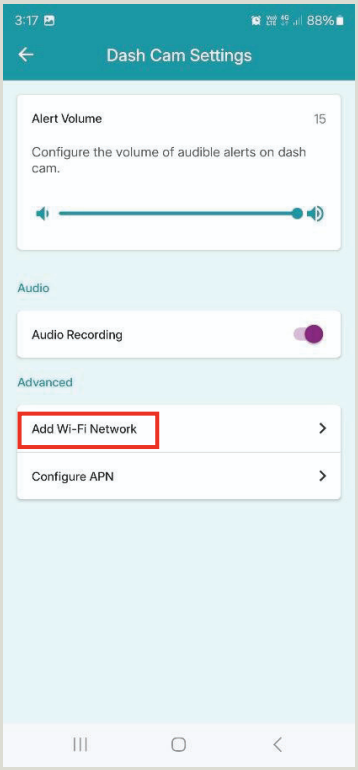
   Tap on it to connect your phone to the camera.

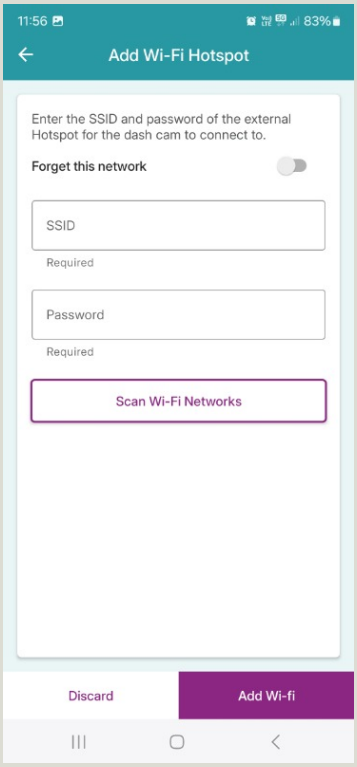


6. **Tap the cog icon** next to *Dash Cam*.



7. Choose “**Add Wi-Fi Network**”, then either enter the Wi-Fi Name and Password or select Scan Wi-Fi Networks and select the correct Network.
Tap "**Add Wi-Fi**".





8. If setup is successful, the camera’s **LED will flash green every 15 seconds.**
The camera should also say "Connected to External Hotspot" followed by "Trip Start".
